SCALE

CONCEPT

Scale is an modular sound absorbing room divider made of 100% wool-felt tiles, which are environmentally friendly, anallergic and highly fire resistant. Its smart design makes it easy to assemble and fully customizable in size, colours and patterns. Scale is available in two versions: Scale Standard - a free-hanging version that comes in three different lengths, and Scale Extend - a modular version that allows you to create custom surfaces in any length or height and build rooms within rooms.

The product consists of three basic elements: square and triangular felt tiles, aluminum rails and plastic clips, everything put together as a modular system.

SCALE

SCALE STANDARD

This version of Scale includes three different units with standard lengths of 124cm, 164cm, 204cm and a curved unit with radius 125 cm (width 155 cm). All customizable in height.

The square and triangular felt tiles are assembled together using small plastic clips, creating a playful pattern enhanced by the alternation of overlaying shadows. Using the same plastic clips the felt wall is connected to a metal profile that can be both hanged from the ceiling

to a wall. Therefore the panels can be used to semi-divide spaces or can be placed against a wall in order to dampen sound.

Scale makes for an exciting combination of versatility, stylish design and good sound absorbency and is suitable for offices and public areas, offering a practical solution to reduce noise and delineate personal space in the open plan.

(42 cm, 82 cm, 122 cm, ...)

R - 125 cm

SCALE

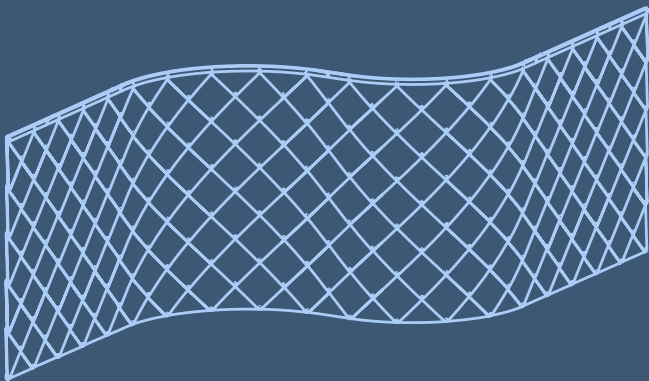

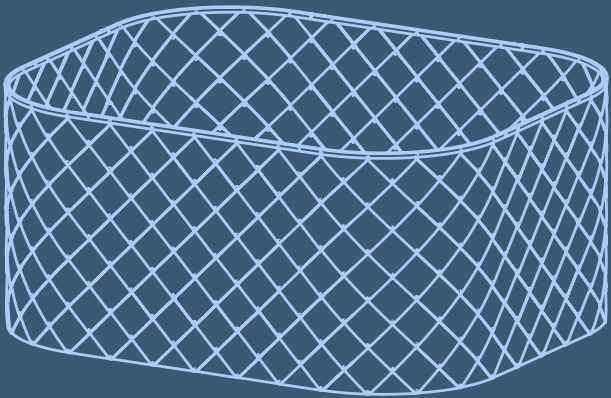

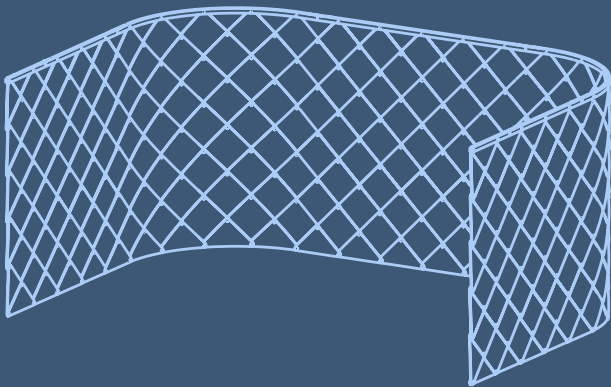

Scale can be used as a solitaire or placed next to one another to screen off a larger area. The panels can be mounted to the wall or ceiling to absorb sound and create attractive, architectural statements.

Three different types of attachments allow Scale panels to be either hung or attached to a wall, with or without a distance for more or less sound absorbcy, meeting the needs of almost any room or environment.

SCALE

SCALE EXTEND

This version of scale includes five different metal profiles that can be assembled to create various types of surfaces and enclosed spaces.

When walls disappear and spaces open up, the need to be able to create a room within a room increases and Scale System is a sound absorbing solution that fulfills this need. Like the standard versions, the system's panels can be both

hanged from the ceiling or attached to a wall in order to best meet the users' specific needs.

Scale System allows architects and decorators to create fluid, adaptable, private and semi-private spaces without the mass or permanence of constructed walls, matching the specific acoustic and logistical needs of an interior while introducing moments of colour, texture and brand reinforcement.

A WELL DESIGNED
OFFICE
ENVIRONMENT
INCREASES
PRODUCTIVITY

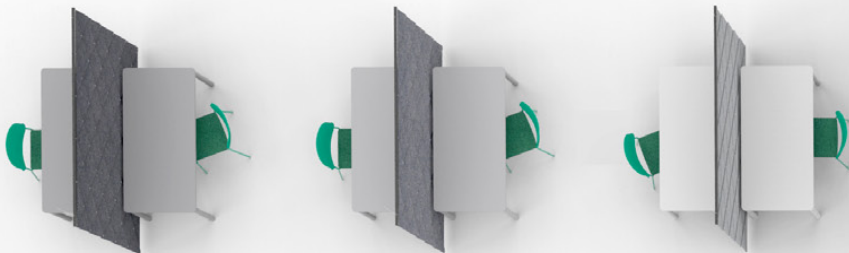

Today's offices are more fluid and more multipurpose than ever. Large, open spaces contain areas for teamwork, socialization, entertainment, and, of course, focused work.

Collaborative teamwork is more and more essential to doing exceptional things, but the price is noise. The acoustic design of the working environment affects the staff's health and productivity, it is therefore important to create a pleasant acoustic environment where the staff can stay both creative and focused.

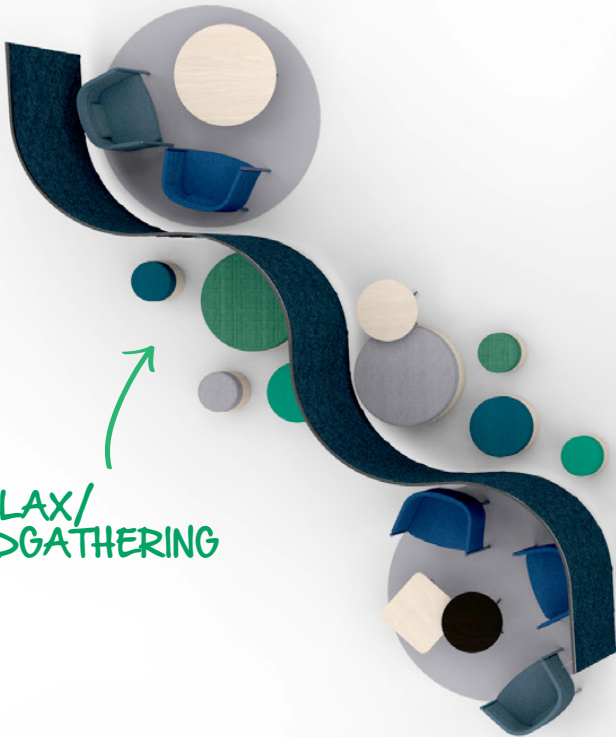

PRIMARY WORKSPACES

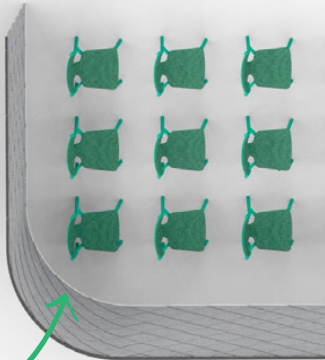

CREATIVE MEETING

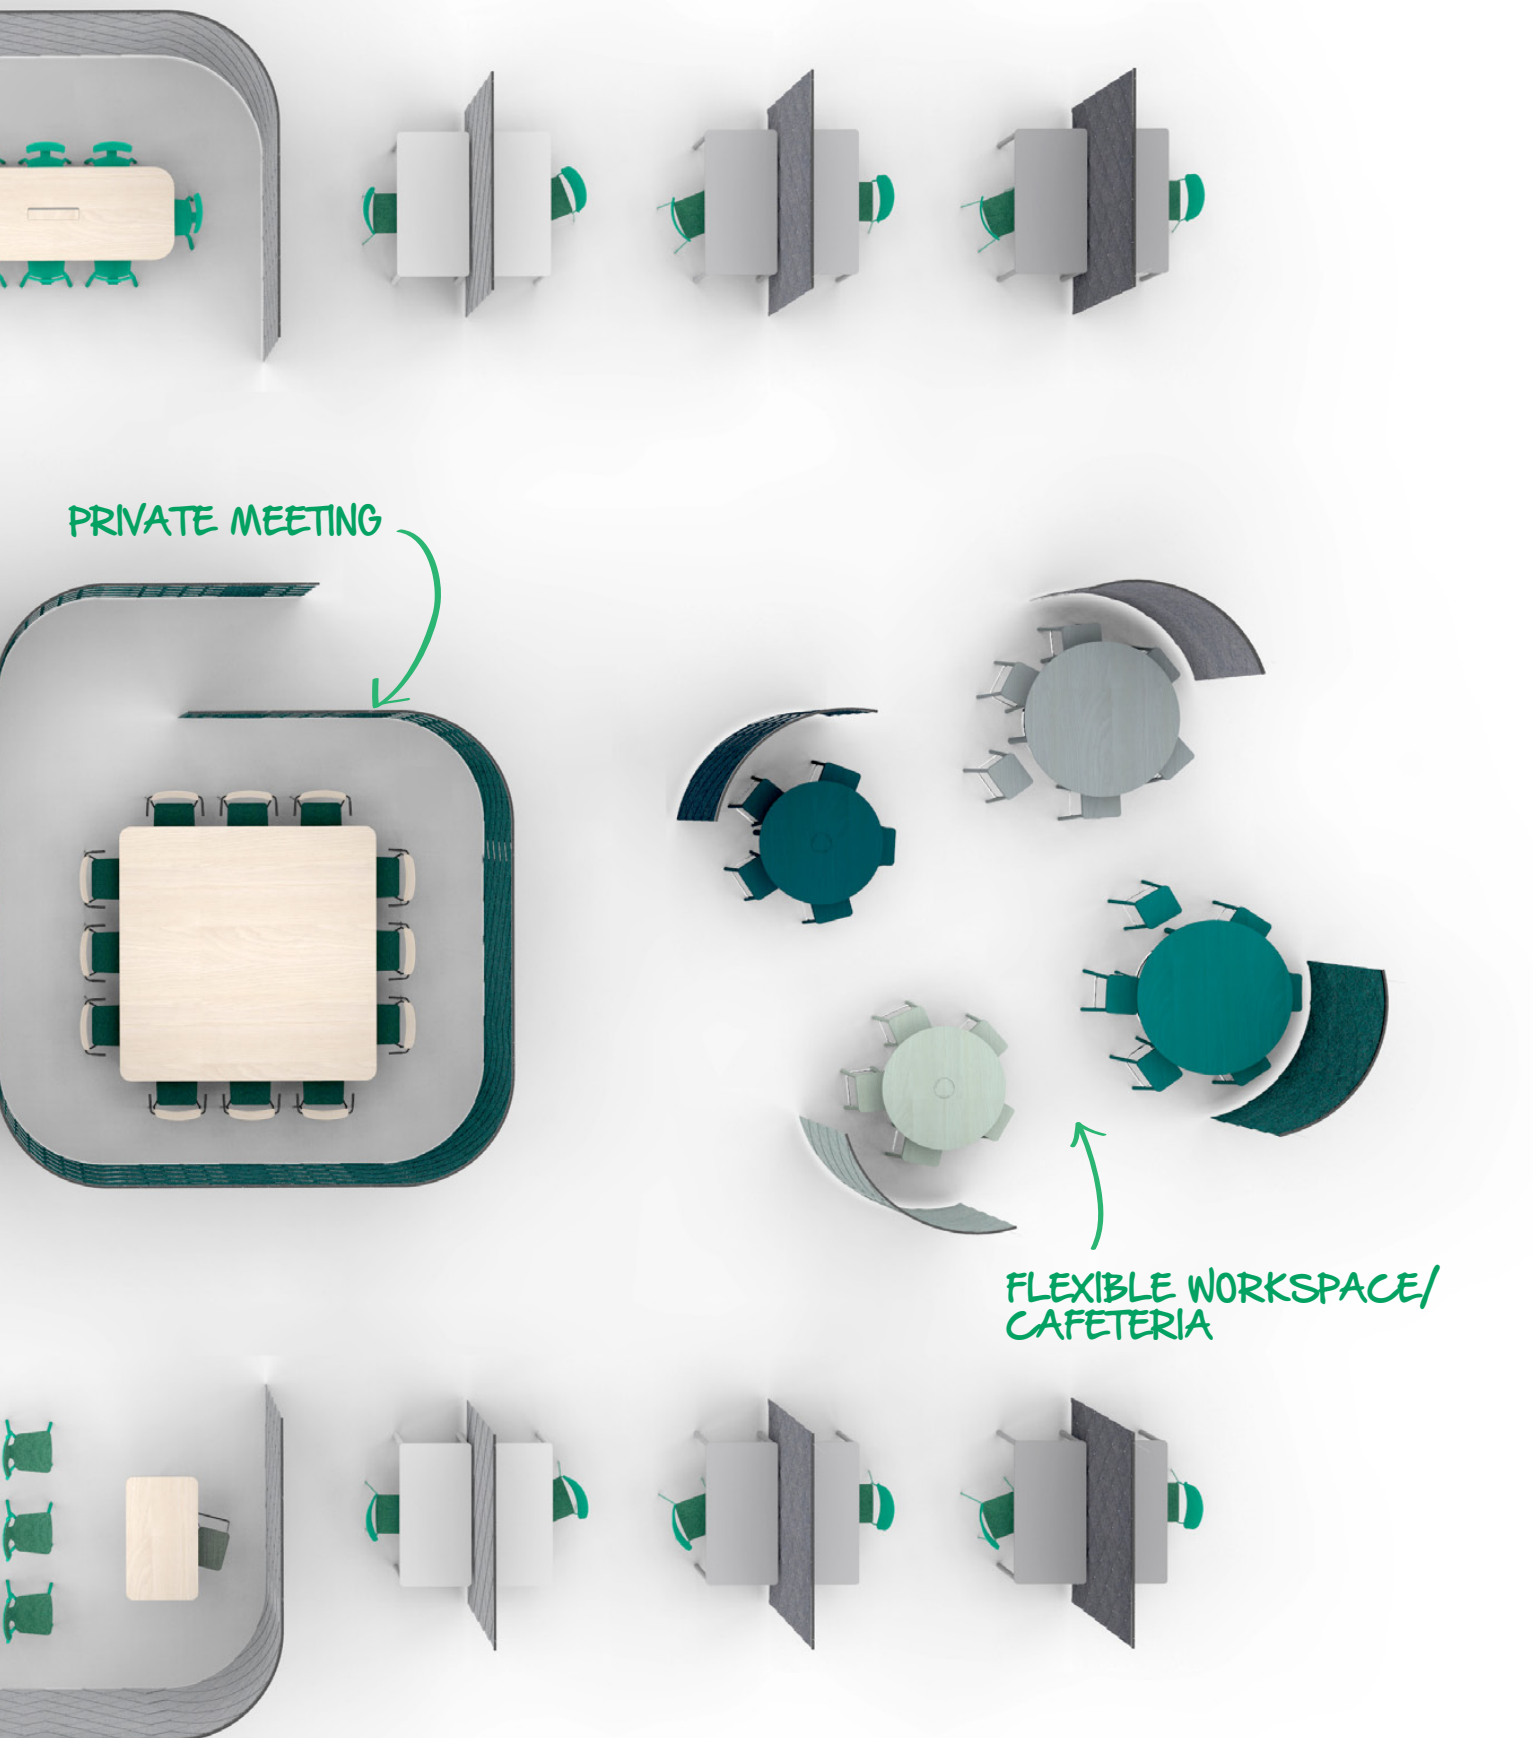

RELAX/
MIDGATHERING

ASSEMBLY/
CONFERENCE

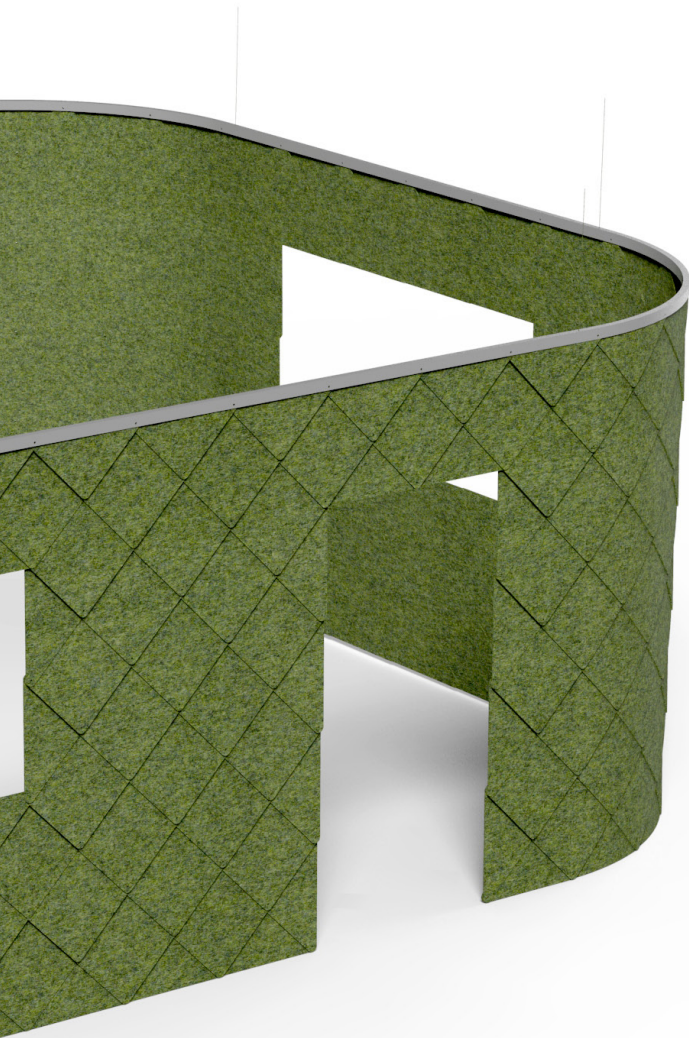

Scale is a very flexible system which easily adapts to the changing requirements of the so called "activity based" workspaces. It can help control acoustic levels in and between Activity Spaces, primary work areas, and highly-trafficked thoroughfares, making for the perfect tool to design ideal working environments.

DOORS & WINDOWS

Scale was specifically conceived to meet the needs of increasingly dynamic and flexible work environments that aim to increase productivity through the stimulation of interaction and communication while retaining employee individuality and need for privacy. With that in mind we gave Scale an important

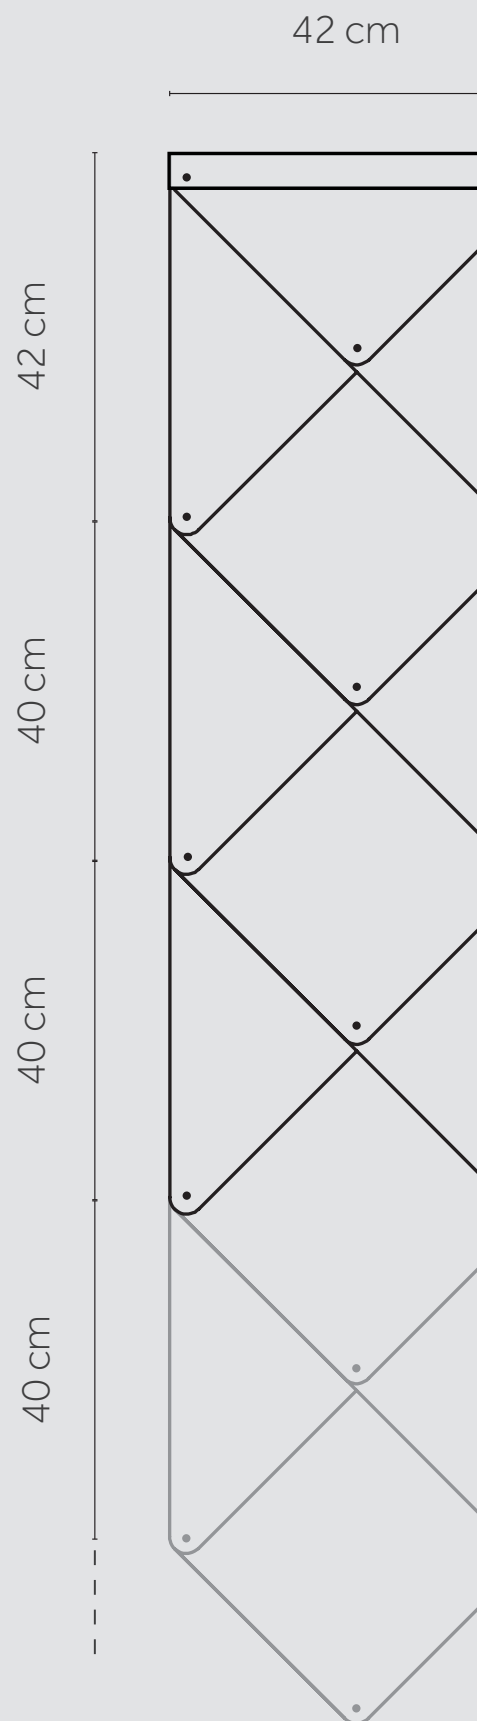

feature which is the possibility of creating openings through its straight surfaces. This feature allows to create areas of privacy and enclosure while maintaining the connection to the surrounding space and facilitating interchange and fast communication when needed.

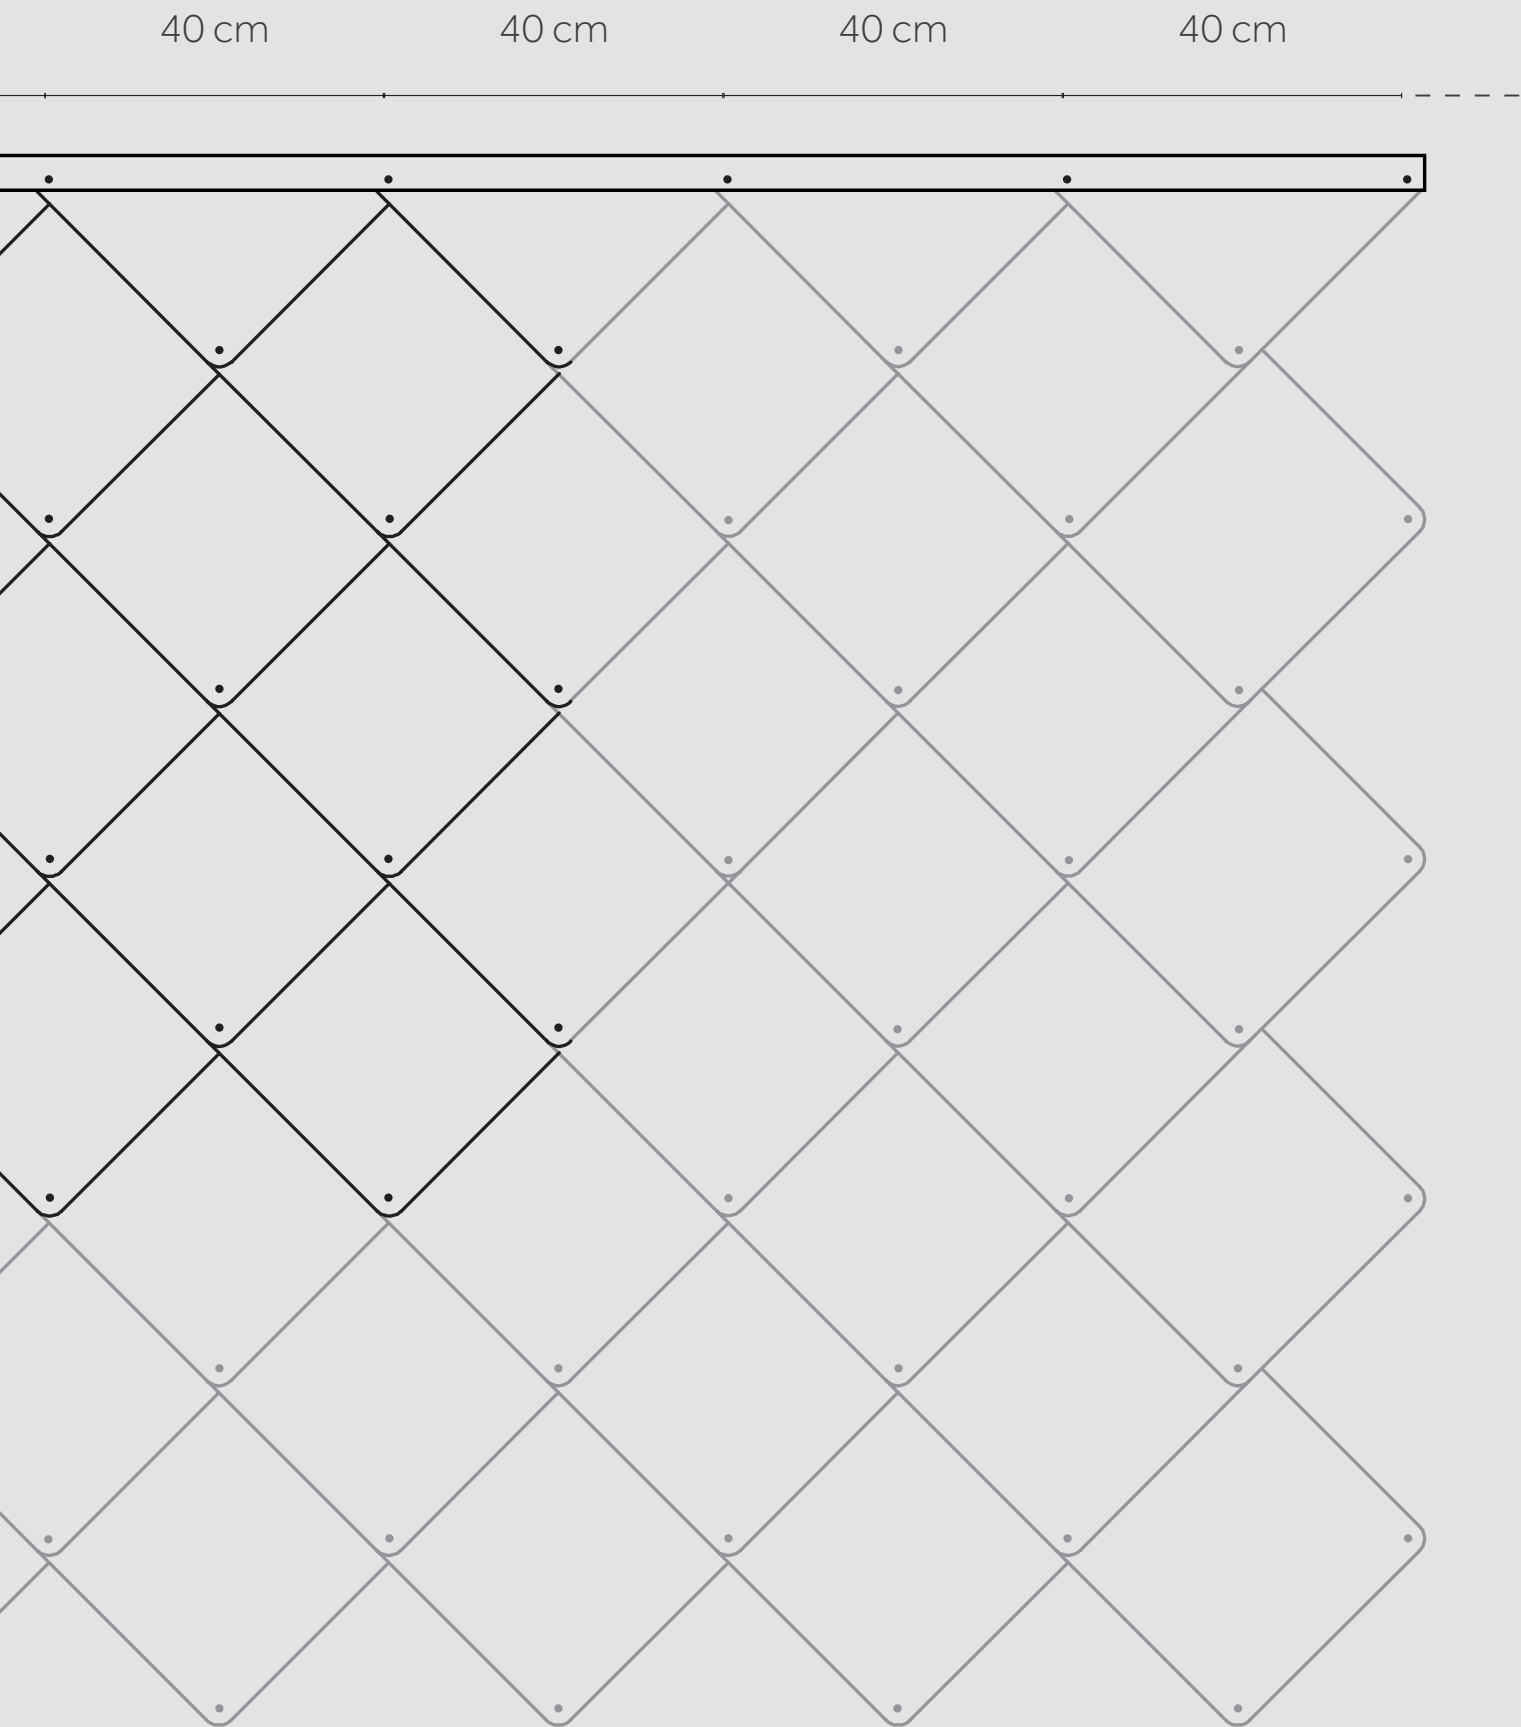

MEASUREMENTS

Scale System's extreme customizability lets you create tailor-made sound absorbing and room dividing solutions for any type of interior.

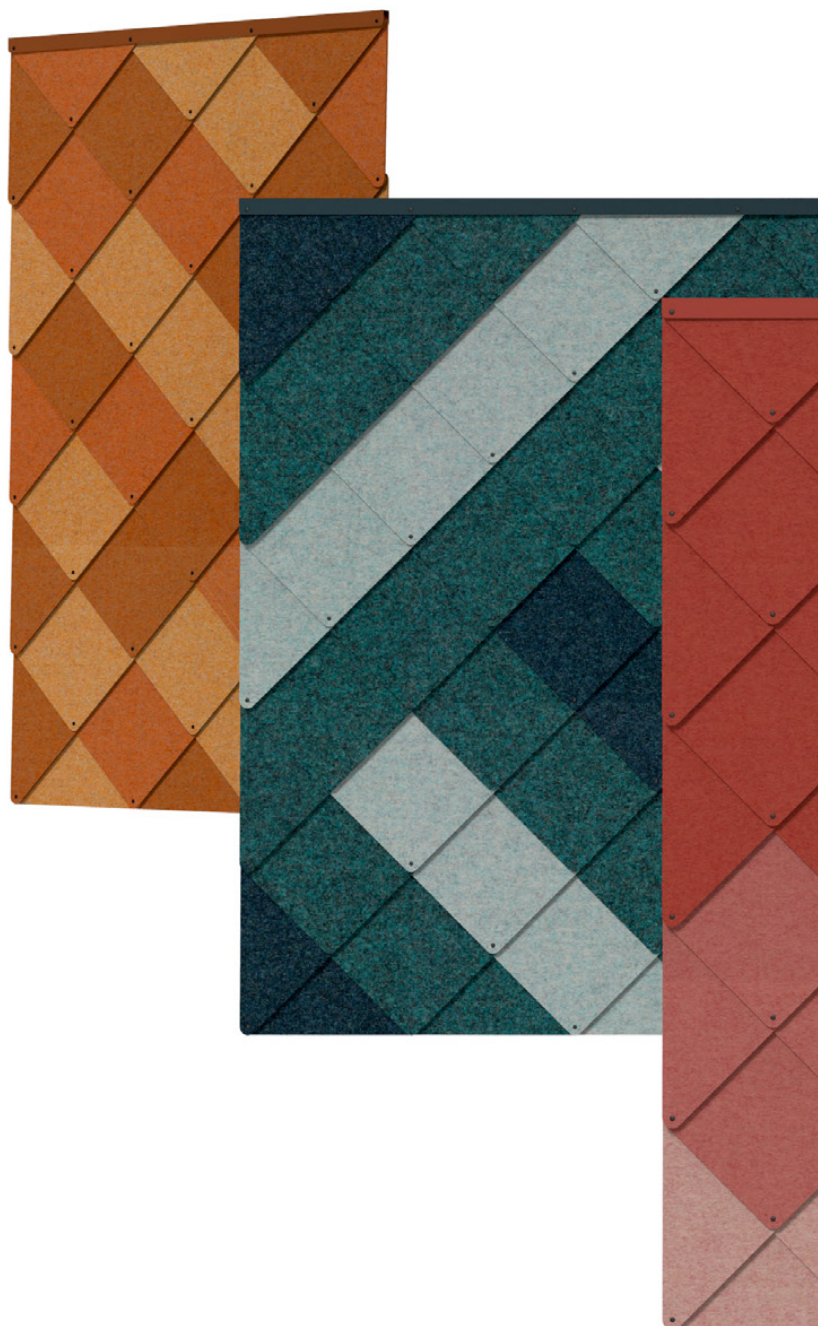

When designing a Scale wall all you need to consider is the size of the square felt tile, which is exactly 40 cm from hole to hole. The first and last measurement both in length and height will be 42 cm since you need to count in the 2 cm from the hole to the edge of the tile. Consequently the length/ height of your Scale system will be for example 244 cm or 284 cm or 324 cm, and so on.

SCALE

100%
WOOL FELT

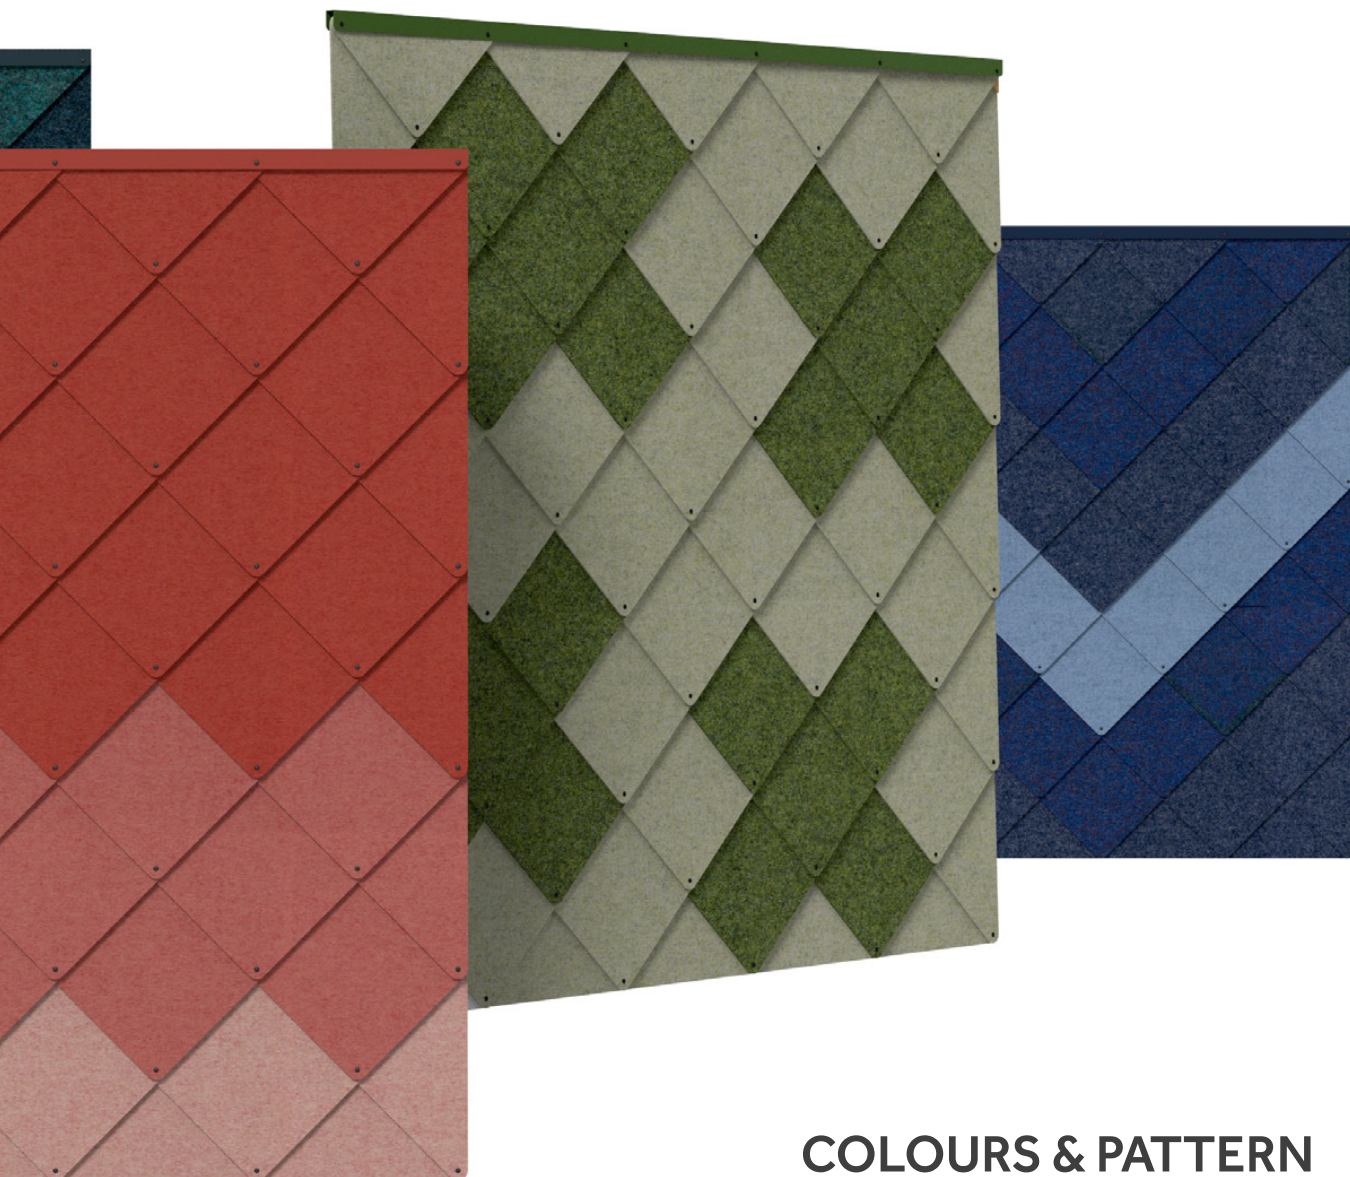

MATERIAL WOOLFELT

The felt used for Scale is made from 100% Merino wool. Felt is perhaps one of the most unique and versatile industrial fabrics available and its many properties are unrivaled by any other single material.

On top of being a biodegradable and renewable material, wool felt is moisture resistant, self-extinguishing, and known for its thermal and acoustic insulation properties and its highly saturated and lightfast colors.

- **100% HIGH QUALITY MERINO PURE NEW WOOL**
- **FIRE-RESISTANT AND SELF-EXTINGUISHING**
- **SUSTAINABLE AND BIODEGRADABLE**
- **ALLERGY-FRIENDLY AND ANTISTATIC**
- **THERMAL AND ACOUSTIC INSULATION PROPERTIES**
- **EASY CARE**

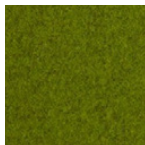

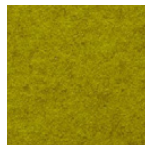

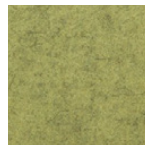

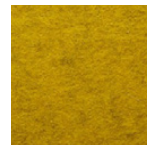

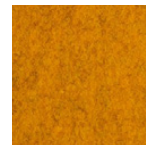

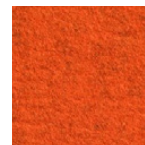

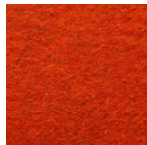

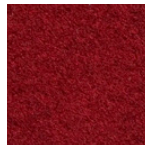

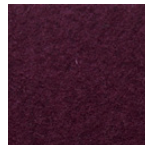

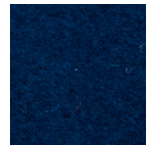

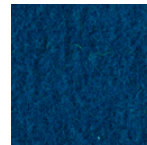

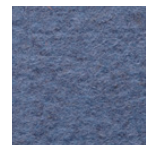

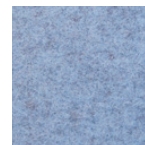

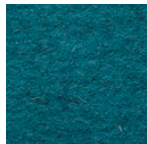

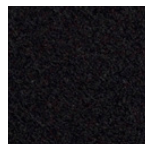

COLOURS & PATTERN

Scale's felt tiles can be produced in a wide range of colours and can be freely combined to create different pattern formations, making for a playful, attractive look. Besides its acoustic benefits, Scale products also introduce texture, warmth and color to the interiors, infusing spaces with a pleasant, welcoming atmosphere.

Areas are differentiated through color, texture and material to create unique environments, each with their own purpose and appeal.
